Priority Area	Recommendation based on output
Category mix	Review Eggs, Meat & Fish for sales leadership and Snacks for profit leadership; consider both sales share and margin when planning assortment.
Low-margin sub-category	Investigate Spices' relatively low margin through purchase cost, pricing, shrinkage, and discount practices before changing prices.
Regional operations	Review West and East as the largest sales regions; validate the very small North region value for missing or misclassified records.
Geographic scope	Because the file contains only Tamil Nadu as a state, do not generalize state-level performance beyond this dataset. Use city-level comparisons instead.
Discount policy	Do not infer that discounts cause profit changes from the near-zero correlation. Compare profit per order and run controlled discount tests if causal assessment is needed.
Monthly planning	Use monthly sales/profit trends for demand planning; investigate low months and compare with stock availability, seasonality, and campaign dates.
Dashboard governance	Keep date parsing rules documented and refresh summaries from the corrected source data to avoid mixed date interpretation.
